

Andrew Fitzpatrick

A talented web developer with design and programming experience specializing in engaging and intuitive ASP.Net websites and applications.

Qualifications

I work as a Senior .Net/Sitecore Developer for a global life sciences corporation, Promega. Before that I worked for 3 years as a senior web developer at a global consumer products corporation, Spectrum Brands, and as a project leader for 5 years with Dane County Government. I started my own digital marketing business, Spotlight Media, and have a bachelor's degree in Computer Science from Tulane University. I have extensive experience in the application lifecycle and in satisfying client's expectations. I am skilled in creating, optimizing, and maintaining ASP.Net websites and applications.

Experience

Promega

2015 - present

I work on a small team that develops and maintains a multi-lingual, ecommerce website that produces more than \$30 million in annual sales. Promega is a leading life sciences manufacturing company in Fitchburg, WI that services leading pharmaceutical and research organizations in 100 countries.

- **Upgrade to Sitecore 8.** I helped plan, test, and implement an upgrade from Sitecore 7.1 -> Sitecore 8.1. The solution being upgraded was a legacy solution with over 100,000 files and custom code from Sitecore 6.2 and earlier versions.

Spectrum Brands

2012-2015

At Spectrum Brands, I worked with a small team developing e-commerce websites and internal web applications for a multi-faceted global corporation with over \$4.25 billion in sales in 2013. My role was to assist business units in implementing web strategies using the latest web standards and technologies.

- **Product Media App.** I developed a responsive, multi-lingual application for our Latin America team that allows brand managers to upload/download product images, videos, and documentation in a searchable, sortable, and filterable website. The app uses ASP.Net MVC, Entity Framework, AJAX, and Foundation.
- **Ecommerce Administration.** In an effort to augment our existing software infrastructure and incorporate data from our third party tools, I developed an app that gives brand managers greater control over their ecommerce websites. Managers use this app for tasks like batch creating single use promotion codes, unlocking all content items locked by an account, or reporting on the number of email signups in Exact Target.

- **United Pet Group E-commerce Websites.** I led the development of 8 e-commerce websites using Sitecore and ASP.Net. Each website was built from new design specs by a graphic design team and migrated from an AbleCommerce or static html site.

Globe University

2014

I taught a programming night class at Globe University, a career college with online and on-location courses at 11 campuses in 4 states. The class was a mix of lecture, discussion, and lab work.

- **Programming 1.** I introduced students to C#, a full featured programming language, through instruction and guided lab work. Students create games, web applications, and a portfolio on Windows Azure and the desktop.

Dane County

2006-2012

As the project leader for more than 60 local government organizations, I implemented a wide variety of website and application solutions. My job duties included project management, server administration, database administration, application development, testing, and training.

- **Windows Server 2008 Upgrades.** I led the transition from physical Windows 2000 servers to virtualized Windows 2008 servers and from SQL Server 2000 – 2008. During this process, I installed and configured software, tested, upgraded, and migrated websites and databases.
- **Intranet Upgrade.** I developed an ASP.Net 3.5 replacement for a classic ASP intranet website that reduced the page load 300%, included a universal template and improved administration.
- **Parking Ticket Payment System.** I developed an ecommerce website that integrated with the management software for two County operated parking garages and allowed citizens to pay for their parking tickets online.

Spotlight Media

2007-2011

I cofounded a digital media and video production company and worked for clients across the country.

- **IMTA.** I worked with the International Modeling and Talent Association to create a website that was stylish and user friendly with a content management system, password-protected document center, photo carousels, and custom flash video players.

Education

Tulane University

2000-2004

Bachelor's Degree in Computer Science; Minor in Business

Sitecore Certified Developer
Microsoft Certified Professional

2012

2013

Technical Expertise

Sitecore, Asp.net MVC, C#, CSS, JavaScript, AJAX, SQL, HTML5, JSON, SOAP, XML, VB
